Dear Harald,

How vital is your tap water?

Vitalized water is good for health. It is how water should be, with a well-organized (fern) structure.

How organized is your tap water? To find out, we examined a water sample of the water from your tap under the microscope. We can see how your tap water is organized, and we also get an idea of the amount of minerals and lime in your water.

Photo

We took a picture of this water sample.

For the record: the photo is made of a single water sample and you cannot derive any rights from this; Of course, your water company is responsible for the water that comes out of your tap.

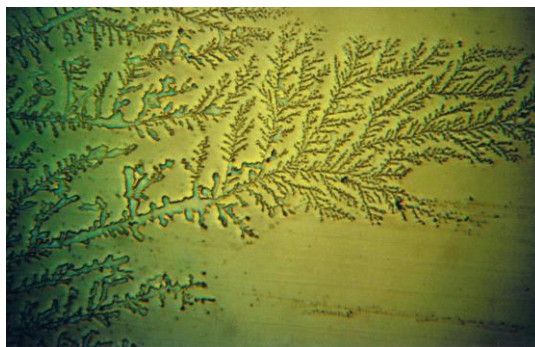

More information

Would you like to know more about vital tap water? Or would you like to know more about our findings? Bring your photo to one of our information meetings and get detailed information. For the next meetings we refer you to our website www.vitaalkraanwater.nl.

How vital is your tap water?

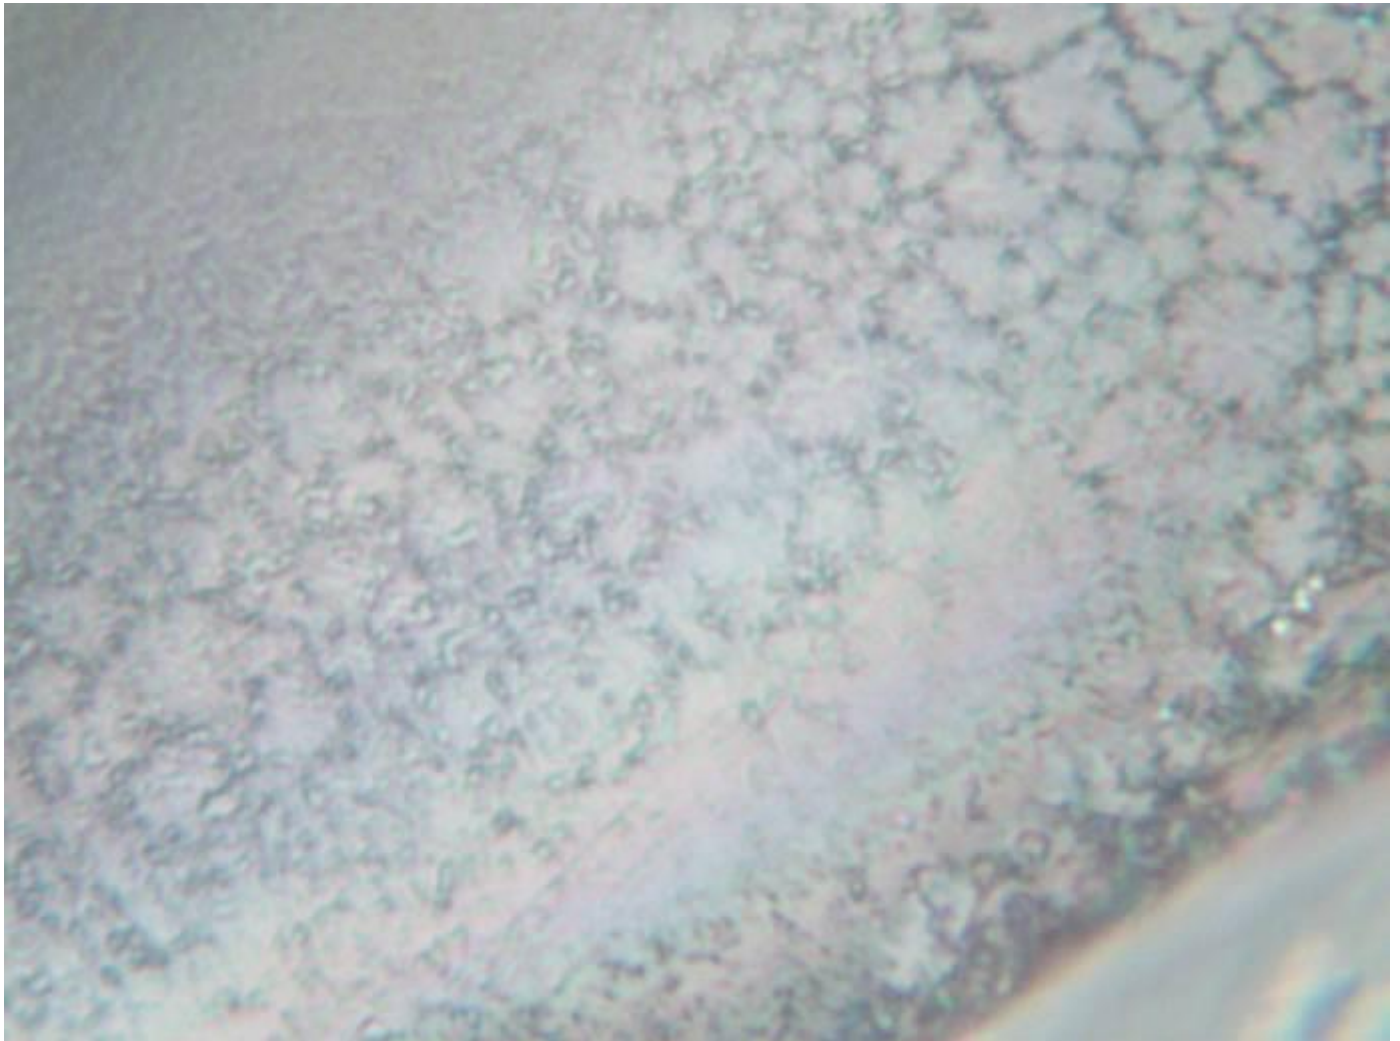

Example not vital

Example vital

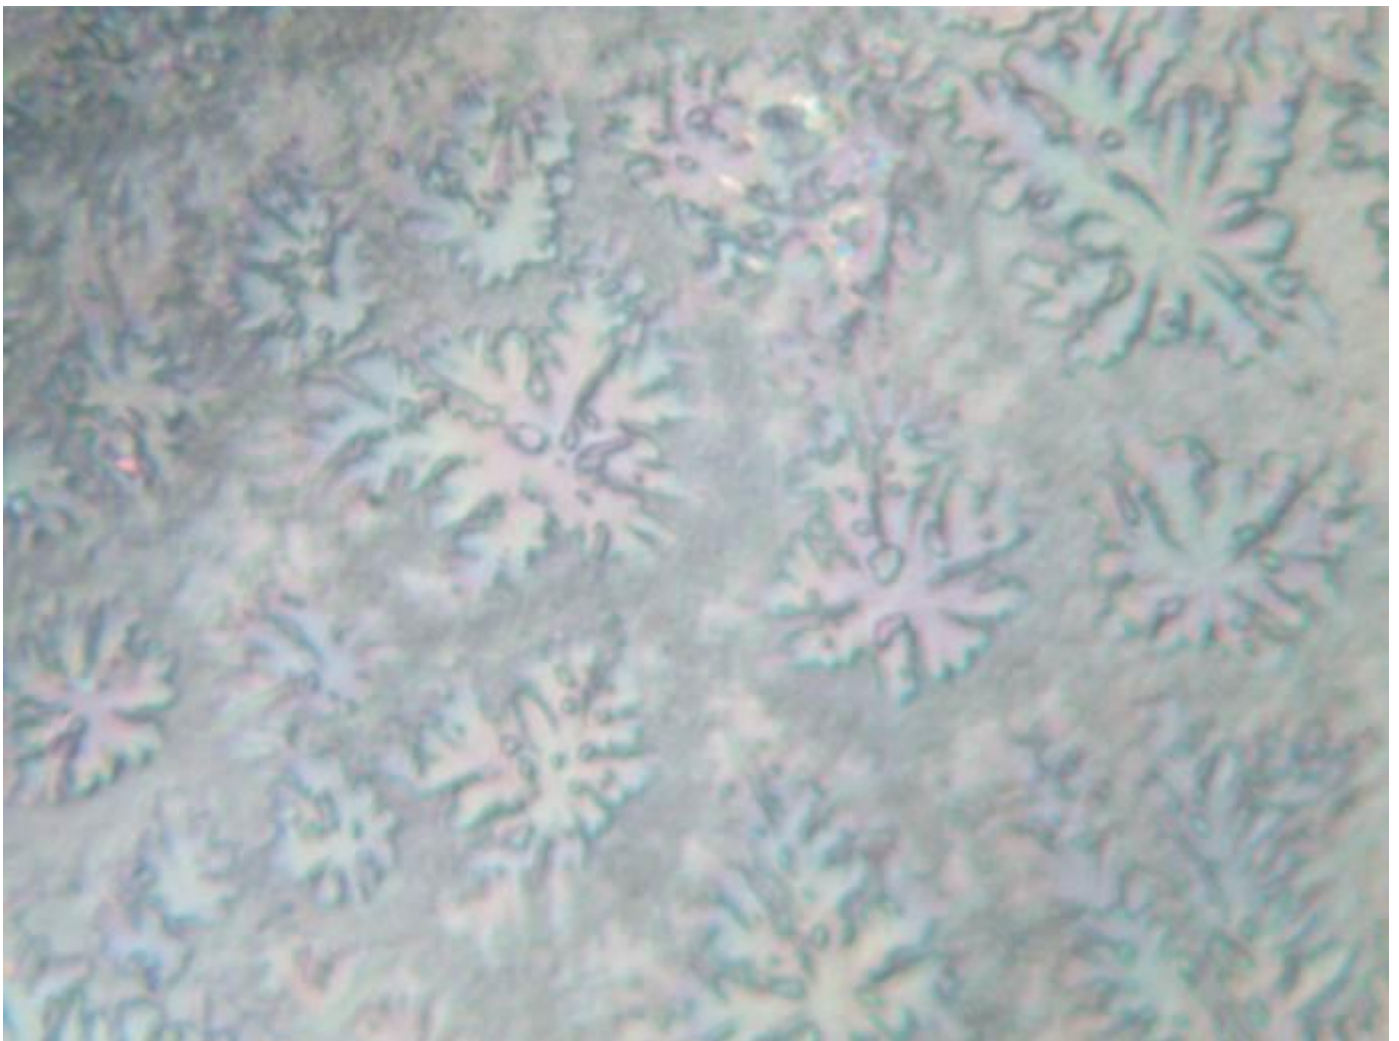

Nijkerk- Tapwater

Minerals are clustered and the more towards the edge of the drop it appears in a structural form. What stands out in this water are the rainbow colors

Nijkerk- Tapwater CT 35

Tap water vital.
Natural (fern) structures are visible.
Here you see nicely shaped regular structures.
Beautiful rainbow colors.

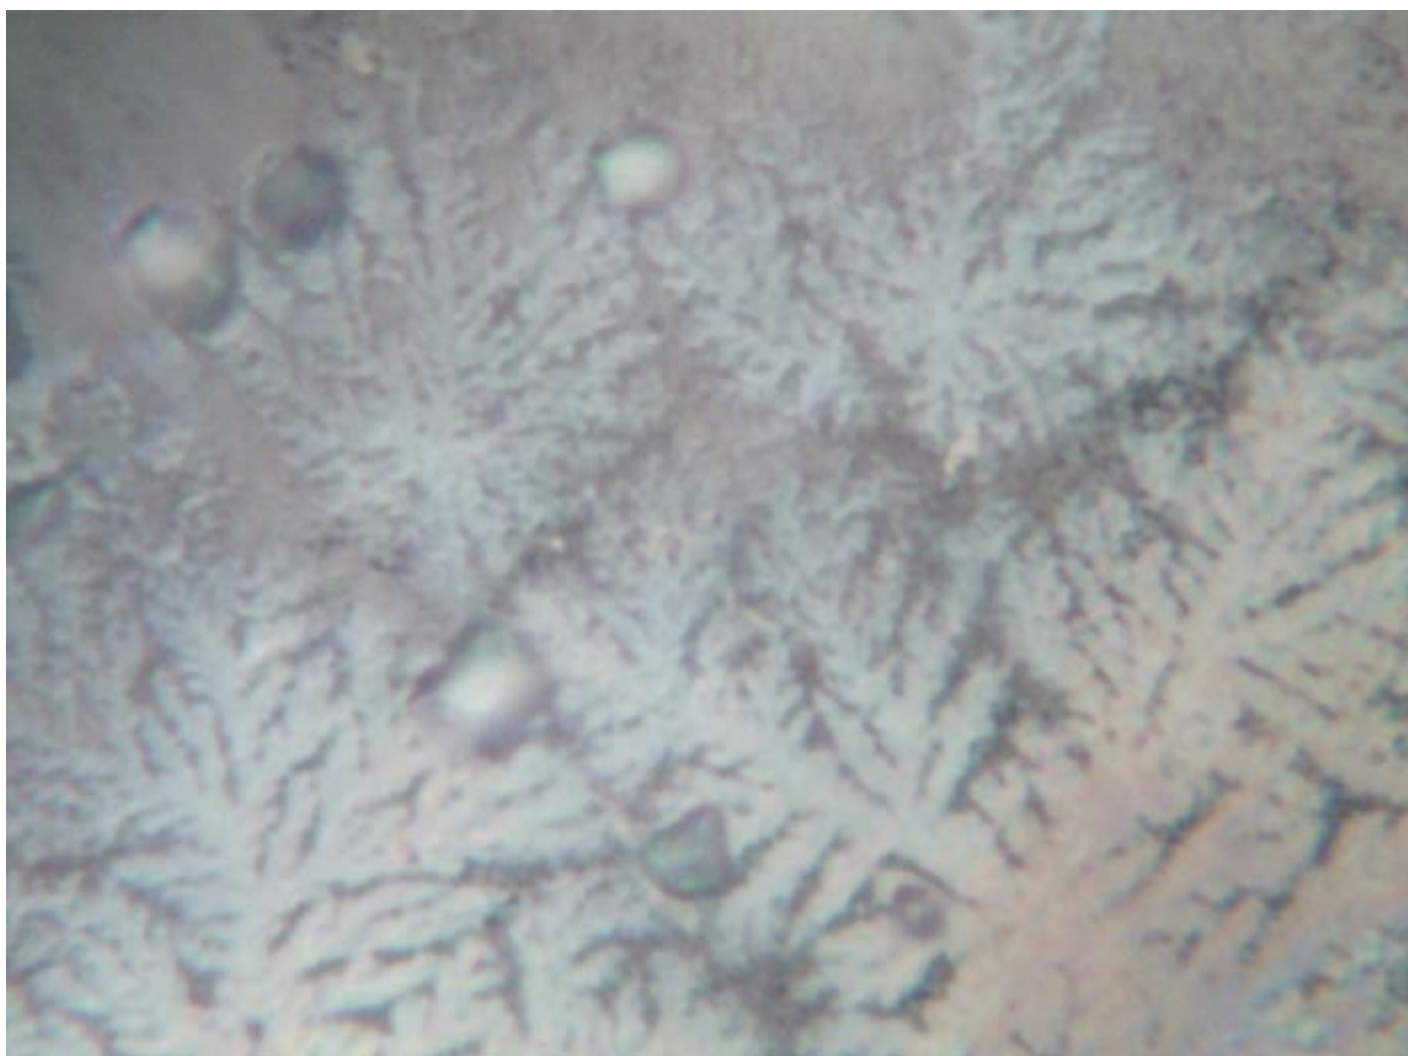

Nijkerk- Tapwater CT 220

Tap water vital

Natural (fern) structures are visible where the shapes are intertwined.

And you see the refinement in structures emerge.

Beautiful vital water in which the rainbow colors can also be seen.

Met vriendelijke groeten,

Ineke Moerman
